

V6000/P power supply Card

Datasheet

V6000/P power supply Card

V6000/P is the rack power supply card. One or two V6000/P cards may be installed in a V6000 rack. If two are present, the second one will operate as a redundant power supply card. V6000/P is operated with appropriate connection panel mounted at the rear of the rack. V6000/P allow the connection of AC and/or DC mains power to the rack.

Power OK LED indicates that device main power is connected.

Power LEDs for relay and transducer powers and measurement & processing system is indicated here separately.
